

PROJECT SPECIFICATION REPORT:

GOWASH MOBILE APPLICATION DEVELOPMENT

1. Introduction

This project involves the design and development of a mobile application for **GoWash**, an on-demand laundry and dry-cleaning service planned to launch in Colombo, Sri Lanka, in 2026. The mobile application will serve as the core digital platform, enabling customers to conveniently request laundry services, track orders, and manage payments. The app is positioned to support GoWash's vision of becoming the "Uber for laundry" through seamless user experience and efficient logistics integration.

2. Project Aim

The primary aim of this project is to develop a user-friendly, reliable, and scalable mobile application that facilitates on-demand laundry and dry-cleaning services for GoWash customers.

3. Project Objectives

- To design an intuitive mobile user interface for both iOS and Android platforms
- To enable customers to place laundry service orders and schedule pickups
- To provide real-time order tracking and status updates
- To integrate secure and flexible payment methods
- To support efficient coordination between customers, service agents, and the laundry facility
- To ensure data security and system reliability

4. Scope of the Project

The scope of this project includes:

- Development of a customer-facing mobile application
- User registration, login, and profile management
- Order placement and scheduling functionality
- Real-time order tracking and notifications
- Payment integration (cash and card options)
- Administrative and service-agent interaction support (backend integration)

Features such as marketing, third-party service management, and physical laundry operations are outside the scope of this project.

5. System Overview

The GoWash mobile application will function as a centralised platform connecting customers, service agents, and the laundry processing facility. The system will utilise a client-server architecture, with the mobile app communicating with backend services to manage orders, user data, and logistics operations.

6. Functional Requirements

- User account creation and authentication
- Service selection (Wash + Press, Only Wash, Only Press, Dry Clean, Express)

- Pickup and delivery scheduling
- Order tracking and status updates
- Payment processing and transaction history
- Push notifications for order progress
- Customer support and feedback submission

7. Non-Functional Requirements

- High usability and accessibility
- Fast response times and system reliability
- Secure handling of personal and payment data
- Scalability to support increased user demand
- Compatibility with modern Android and iOS devices

8. Target Users

- Urban residents in Colombo
- Busy professionals and students
- Households seeking convenient laundry solutions

9. Assumptions and Constraints

- Users will have access to smartphones and internet connectivity
- Payment gateways will be available for integration
- The project timeline is constrained by academic or development deadlines

10. Conclusion

The GoWash mobile application aims to enhance customer convenience and operational efficiency by digitising the laundry service experience. This project will lay the foundation for a scalable and technology-driven platform that supports GoWash's planned launch in 2026.
